

My microclimate

- Can you explore your house and garden to find the place that is the most:

Coldest	Quietest	Warmest
Dampest	Windiest	Greenest
Dullest	Most sheltered	Crowded
Brightest	Least sheltered	Colourful

- Where would be the most suitable place for Barnaby Bear and his friend to camp in your garden? What will you have to think about? Watch this [video](#) for an example.
- Design Time!** Can you use the materials you have in your house or in your garden to design a home for Barnaby Bear and his friend? What will you have to think about when designing a home? What if the home is in a very hot or very cold place? What if the home is in an area that floods regularly?

A fun investigation to try!

Can you challenge yourself and think about where the perfect place might be to plant some bulbs. They will need light, water, soil and maybe shelter. You could carry out an investigation by planting bulbs in different locations of your garden or in pots on various window ledges. What can you find out about the rate of growth?
