

Outside my window

- Look out of each of the windows in your house and decide which view you like the most and least. You can rank the view from each window. Does standing closer to the window or crouching and looking from a different height make a difference?
- Choose one window and create a field sketch of the view outside. This should be a 'rough' drawing annotated with labels that describe the human and physical features that can be seen.
- **Time for some Maths!** What shapes can you see outside? Can you pick out different lines: parallel, vertical, horizontal? Can you find any angles: obtuse, reflex, acute?

What if...

You could change the view outside your bedroom window? What would you like to see each morning when you look outside? What smells and sounds might drift towards you and enter your bedroom?

Go back to the window that you thought had the worst view? What if you could enhance this view? What would you do?
